Work Experience

Synology

FULL STACK ENGINEER

New Taipei, Taiwan

Nov. 2022 - present

Synology Photos, NAS Web Application

- Architected a fault-tolerant photo grouping system to manage millions of assets, ensuring 100% data integrity during high-concurrency operations.
- Reduced API response time by 50% by eliminating redundant database queries.
- Designed a queue-based request system to manage high-throughput workloads and prevent service degradation under load.
- Took ownership of customer-reported bugs and delivered timely fixes, reducing downtime and improving user satisfaction.
- Led react-router upgrade, enhancing code stability with comprehensive tests and documentation.
- Delivered multiple new features and ensured stable releases through consistent and reliable implementation.

Data Transfer Server, NAS Application

- Built testing workflows using Python scripts and a lightweight web app to validate bidirectional data transfer between DTP and Google Photos, identifying critical bugs.
- Developed a DTP-based sync app for NAS, designed for extensible integration with other major cloud platforms.

Synology Image Assistant, Desktop App

- Developed a cross-platform desktop app to offload intensive media parsing from NAS, improving NAS performance.
- Improved video streaming performance by redesigning the transfer flow between NAS, browser, and desktop app, reducing browser resource consumption and accelerating video processing time by 50%.

Advanced Media Server, NAS Application

- Optimized application build process, reducing package size by 50% for faster deployment and user experience.
- Migrated frontend from Vue 2 to Vue 3, reducing bundle size by 20% and improving maintainability.
- Eliminated proprietary codec dependencies, directly reducing ongoing patent fees and achieving significant cost savings.

Education

National Tsing Hua University

B.S. IN COMPUTER SCIENCE

Hsinchu, Taiwan

Sep. 2020 - Jun. 2022 (Completed)

Technical University of Munich

EXCHANGE STUDENT

Munich, Germany

Oct. 2021 - Mar. 2022

Nanjing University

B.S. ELECTRONIC ENGINEERING

Nanjing, China

Sep. 2018 - Jun. 2020 (Dropped)

Project Experience

Cloud-Native Image Processing Service

SOLO DEVELOPER

Release Soon

May. 2026 - Now

- Built a serverless image processing pipeline on GCP using Cloud Run and Cloud Storage.
- Automated cloud infrastructure provisioning utilizing Terraform.
- Developed a containerized backend and a responsive React frontend.
- Implemented secure file upload flows and strict IAM access controls.
- Focused on scalable architecture and cloud-native deployment workflows.

Skills

Programming C++/C, JavaScript, Java, Python, CMake, PostgreSQL
Framework React/Redux, Vue/Vuex, ElectronJS, ExtJS
Languages Chinese(Native), English(Fluent), Korean(Beginner), Germany(Beginner)
Other/Interest Standard First Aider(Certified), Workout, Travel
